

## Product Appearance Declaration

### SIENA RECLAIMED WOOD

This product is made from reclaimed lumber and is a natural product. Variations between provided samples and the final product may occur. Any variation or defect is acceptable with reclaimed lumber if the product is structurally sound. Examples of variations and defects include but are not limited to: mineral staining, tool marks, weathering, discoloration, rough-sawn, cracking, mixed grain patterns, and/or nail holes. These imperfections should be expected as part of the character and beauty of reclaimed wood.

Siena further makes no representations about likely yield percentages or waste factors for use/application. It is the customer's responsibility to verify the suitability of Siena reclaimed wood and to determine the appropriate quantities to account for yield/waste issues stemming from the variation in board length and width.

### METAL, INSECT, AND CONTAMINANT DISCLAIMER

Siena does not represent this product to be free of metal, dirt, paint (including lead-based paint), lead, insects/bugs, or other contaminants. Even when the reclaimed material goes through Siena's metal detection/removal process, the customer is responsible for verifying that the material is fit for sawing or other processing.

Siena cannot be certain of all previous uses of reclaimed material. Since most reclaimed material is salvaged from structures dating pre-1978, the material may have come into contact or contain lead-based paint. (For more information on this, go to <http://www.epa.gov/lead>)

While Siena's process typically includes kiln drying and other industry standards to prevent insect/bug issues, these services do not create a guarantee or warranty that the material is or will be completely insect/bug free. Siena may, at the customer's request, apply borate, fumigants or other treatments in an attempt to reduce the potential for insect/bug issues. Unless specifically noted as being fumigated/treated, our products are generally not fumigated or treated for insects or bugs.

While kiln drying typically prevents any mold/fungus issues, in the event that mold/fungus issues arise, the customer must notify Siena within 10 days of product shipment. Siena accepts no responsibility or liability for mold/fungus issues which arise after the receipt of products.
